

Question: What is the Account Creation module?

Answer: The Account Creation module is a tool that allows you to automate and manage the creation of accounts on supported services. It is designed to help you:

- View existing account creation jobs.
- Manage them with actions such as Start, Stop, Pause, and Delete.
- Set up new jobs with workflows that can be executed after an account is created.

Question: What does Account Creation do?

Answer: The Account Creation module automates the process of creating new accounts on various supported services. It provides a central place to view and manage these tasks, with options to start, stop, pause, or delete jobs. You can also configure a workflow that runs after an account is successfully created.

Question: How can I use the account creation tool?

Answer: You can use the account creation tool to automate the creation of accounts on different services. You can set up new jobs, monitor their status, and manage them with bulk actions. The tool also allows you to define specific workflows to be carried out after each account is created, streamlining your processes.

Question: What is the purpose of account creation module?

Answer: The purpose of the Account Creation module is to simplify and automate the process of creating accounts in bulk. It is designed to save you time and effort by managing all your account creation jobs in one place and allowing you to set up post-creation workflows for a more efficient process.

Question: How do I access the Account Creation Jobs page?

Answer: To access the Account Creation Jobs page, click on the Account Creation tab from the sidebar. You will then be redirected to the page that lists all of your existing account creation jobs.

Question: Where is the account creation jobs list?

Answer: The account creation jobs list is located on the Account Creation page. You can get there by clicking on the Account Creation tab in the sidebar.

Question: How do I see all my account creation tasks?

Answer: To see all of your account creation tasks, click on the Account Creation tab in the sidebar. This will take you to the Account Creation Jobs page, where all of your tasks are listed.

Question: Where can I find created jobs?

Answer: You can find all of your created jobs on the Account Creation Jobs page. To get to this page, simply click on the Account Creation tab in the sidebar.

Question: What information is shown in the Account Creation Jobs table?

Answer: The Account Creation Jobs table displays a list of all previously created account jobs. Each row provides the following information:

- **SR No.:** The serial number.
- **Name:** The name of the job.
- **Created At:** The date and time the job was created.
- **Status:** The current state of the job, such as Running, Paused, or Stopped.
- **Max Success:** The maximum number of successful account creations that are allowed for the job.
- **Max Failure:** The maximum number of failed attempts that are allowed for the job.
- **Service:** The platform for which the accounts are being created (e.g., Instagram).
- **Actions:** Controls to manage each individual job.

Question: What details are displayed for each account job?

Answer: For each account job, the table displays a number of details, including the job's serial number and name, the date and time it was created, and its current status. It also shows the maximum number of successful and failed attempts allowed, the service it's targeting, and a set of actions you can take to manage it.

Question: What columns are in the jobs table?

Answer: The columns in the jobs table are: SR No., Name, Created At, Status, Max Success, Max Failure, Service, and Actions. These columns provide a comprehensive overview of each account creation job.

Question: What data can I view about my account creation jobs?

Answer: You can view several key data points about your account creation jobs. This data includes the job's name, its creation date, its current status (Running, Paused, or Stopped), and the limits set for successful and failed attempts. The table also indicates the service being used and provides a list of actions you can perform on each job.

Question: What actions can I perform on each account job?

Answer: For each account job listed in the table, you can perform the following actions:

- **Start:** To begin the account creation job.
- **Stop:** To end the job immediately.
- **Pause:** To temporarily halt its execution.
- **Delete:** To permanently remove the job.
- **View Analytics:** To access reporting data and logs for that specific job.

Question: How do I start or stop an account job?

Answer: You can start or stop an account job by using the controls in the Actions column of the jobs table. Simply click on the Start button to begin the job or the Stop button to end it immediately.

Question: Can I delete an account creation task?

Answer: Yes, you can delete an account creation task. In the Actions column for the specific job you want to remove, you will find a Delete button that allows you to permanently remove the task.

Question: What is view analytics for a job?

Answer: View Analytics is an action available for each account job. When you select it, you can access detailed reporting data and logs for that specific job, which helps you monitor its performance and troubleshoot any issues.

Question: How do I create a new Account Creation Job?

Answer: To create a new Account Creation Job, follow these steps:

1. Navigate to the **Account Creation** tab in the Dashboard.
2. The Account Creation Page will open.
3. Click on the **Create Job** button in the top-right corner.
4. This will open the **New Account Creation** page.

Question: Where is the Create Job button?

Answer: The Create Job button is located in the top-right corner of the Account Creation page. To get there, simply click on the Account Creation tab on the Dashboard.

Question: How do I set up a new account creation task?

Answer: To set up a new account creation task, go to the Dashboard and click on the Account Creation tab. On the page that opens, click the Create Job button in the top-right corner to begin the setup process.

Question: Can I add a new account job?

Answer: Yes, you can add a new account job. To do so, navigate to the Account Creation page by clicking on the tab in the Dashboard, and then click the Create Job button located in the top-right corner.

Question: How do I create a new Account Creation Job?

Answer: To create a new Account Creation Job, follow these steps:

1. Navigate to the **Account Creation** tab in the Dashboard.
  2. Click on the **Create Job** button in the top-right corner.
  3. This opens the **New Account Creation** page.
- **Step 1 – Account Creation Details**
    - **Enter a Job Name:** Provide a descriptive name for the job (e.g., `my_first_account_job`).
    - **Select Service:** Choose the target platform (e.g., `Instagram`).
    - **Choose Devices:** Select the device that will run the job.
    - **Choose AppClones:** Select the available clones (this option appears after device selection).
  - **Email Configuration**
    - **Enter Name:** Define the name of the account holder.
    - **Choose Email Provider:** Select an email provider like Gmail or Outlook.
    - **Add API Configuration:** Provide the necessary API details for the email provider.
  - **Phone Configuration**
    - **Choose Phone Provider:** Select a phone provider (e.g., Twilio, 5SIM).
    - **Select Phone Country:** Choose the country for the phone number.
    - **Enter City:** Enter the city if required.
  - **Proxy Configuration**
    - **Choose Proxy Provider:** Select a proxy provider.
    - **Select Proxy Country:** Choose the country for the proxy.
    - **Enter City:** Enter the city if applicable.
  - **Additional Settings**
    - **Enable or disable 2fa.live:** Decide whether to use 2FA integration.
    - **Set stop conditions:**
      - **Max Success Count:** Set a limit for successful account creations.
      - **Max Failure Count:** Set a limit for failed attempts.
    - Click **Save and Next** to continue.
  - **Step 2 – After Creation Configuration**

- Click **Add Workflow Step**.
- Choose from the available workflows:
  - **Profiling Configuration:** To set profile details like bio and name.
  - **Posting Configuration:** To configure posting tasks.
  - **Send to Warmup Center:** To send the account for gradual warm-up.
  - **Warmup Configuration:** To define activity and interaction rules.
- Fill in the required details for your selected step and click **Add Step**.
- You can add multiple workflow steps, though some, like **Profiling**, cannot be duplicated.
- **Step 3 – Finalization**
  - After adding all desired workflow steps, click **Submit All Data**.
  - The system will create the job, and you will be redirected back to the Account Creation Jobs table where the new job will appear.

Question: What are the steps to create an account job?

Answer: To create an account job, you first navigate to the Account Creation tab on the Dashboard and click Create Job. The process has three main steps. In Step 1, you enter the basic details, including a job name, service, devices, and configurations for email, phone, and proxies. In Step 2, you add optional workflow steps to be performed after creation, such as profiling or sending the account to a warmup center. In Step 3, you review and submit the data to finalize the job.

Question: How do I set up account creation?

Answer: Setting up account creation involves three steps. You start by clicking Account Creation and then Create Job on the Dashboard. Step 1 is where you configure the core settings like the job name, target service, devices, and a variety of email, phone, and proxy configurations. Step 2 allows you to add post-creation workflow steps like profiling and warming up. Finally, in Step 3, you review and submit the data to create the job.

Question: What configuration is required to create a job?

Answer: To create an account creation job, you need to configure several settings in a step-by-step form. Required configurations include a Job Name, the Service (e.g., Instagram), and the selection of Devices and AppClones. You also need to configure Email, Phone, and Proxy providers and their details. Additionally, you can set stop conditions like Max Success Count and Max Failure Count and add post-creation workflows like Profiling or Warmup in the next step.

Question: Can you guide me through the account job process?

Answer: The account job process begins by clicking Account Creation and then Create Job on the Dashboard. This opens a three-step process. Step 1 is for setting up basic information such as the job name, service, devices, and configurations for email, phone, and proxies, along with defining stop conditions. Step 2 is where you add optional post-creation workflow steps, like configuring a profile or sending the account to a warmup center. The process concludes with Step 3, where you review your setup and click Submit All Data to create and save the new job.
